

Technical Document #745: Blockchain - Comprehensive Overview

Technical Document #745: Blockchain - Comprehensive Overview

Tokenomics studies the economic systems of cryptocurrency tokens. It covers supply mechanisms, incentive structures, and value capture.

Decentralized finance (DeFi) recreates traditional financial systems using blockchain technology. It enables lending, borrowing, and trading without intermediaries.

Blockchain is a distributed ledger technology that records transactions across many computers. It ensures transparency and immutability.

Robotics combines mechanical engineering, electrical engineering, and computer science. Modern robots can perform complex tasks in unstructured environments.

Digital twins are virtual replicas of physical systems. They enable simulation and optimization without risking real-world resources.

Cloud computing has democratized access to powerful computing resources. Startups can now access the same infrastructure as large enterprises.

Key Takeaways:

- Proof of Stake (PoS) selects validators based on their stake in the network.
- Proof of Work (PoW) is a consensus mechanism where miners solve complex puzzles to validate transactions.
- Tokenomics studies the economic systems of cryptocurrency tokens.
